

PADP

- Classes of computer
- Defining computer architecture
architecture (compare)
- Power dynamic (trends in cost and energy) – problems
- Diameter problem
- Dependability (mttf problems)
- server benchmarks
- Quantitative (formula)

APPENDIX A pg A5 to A10

C2

- Hazards
(5 stages) clock cycles

Chapter 3.1

Instruction level parallelism

Data dependency

control dependency

Name dependency

3.2 basic pipeline (write MIPS code for a code)(for loop eg)

Scheduling

3.3 (quiz) (go through)

–Dynamic scheduling (DIAGRAM)

THOMASULO ALGORITHM (3.4)

OR

HARDWARE BASED SPECULATION! (3.6)

2nd Unit

CHAPTER 5.1 intro

Shared memory , distributed memory
(DIAGRAM AND DIFFERENCE)

Challenges
